## MiTek

## STRUCTURAL COLUMNS AND PLATE KITS CATALOGUE

## BLACKJACK 2.5 Adjustable Support Column

Adjustable Support Column BlackJack 2.5 is designed and tested to meet or exceed the CAN/CGSB-7.2-94 Adjustable Steel Columns standard.

Materials: Tube: $2-1 / 2^{\prime \prime} \times 2-1 / 2^{\prime \prime} ; 11$ gauge
Top Plate: 3-1/2" x $6^{\prime \prime} ; 3 / 8^{\prime \prime}$ thick
Bottom Plate: 4-1/2" x $6^{\prime \prime}$ "; 3 gauge
Finish: Tube - Powder-coated Black Paint; Plates - Grey Primer Paint

## Installation:

- Ensure column is installed in a vertical and plumb position.
- Column base shall be aligned and secured to a proper supporting slab.
- Top plate shall cover the full width of the supported beam. Beam shall be centered on the top plate and continuous across the entire length of the plate. Split beam installation is not permitted.
- For multiple ply beams, ensure to laminate plies together to act as a single member.
- Square tube may be cut down, ensure cut is smooth, square and level.
- Rotate jack screw to desired height. Secure the top plate to beam with two (2) $1 / 4^{\prime \prime} \times 2$ " screws for wood beam, self tapping screws or tack weld for steel beam.

1) Column Allowable Load has been determined through testing standards prescribed in the National Research Council Evaluation Directive for Adjustable Steel Columns using a safety factor of 2.25 .
2) The Factored Resistance of the column is soft converted by multiplying the Allowable Load by 1.44.
3) Factored Bearing Resistances are for standard term loading; reduce for other load durations in accordance with the code.
4) SCL Factored Bearing Resistance assumes $1-3 / 4^{\prime \prime}$ ply width and specified compression perpendicular to grain $f_{c p}=1,365 \mathrm{psi}(9.4 \mathrm{MPa})$. For beams of weaker specified $f_{c p}$ or smaller width, calculate the Factored Beam Bearing Resistance as follows: overall beam width $x$ plate length $x f_{c p} x 0.8$. Use the minimum of the calculated "Factored Beam Bearing Resistance" and the "Factored Resistance of the Column Capacity supporting steel beam" as the Factored Resistance of the column supporting the respective beam.
5) For 3-ply or 4-ply $2 x$ beams, rotate plate to ensure full plate coverage over the width of the beam.
6) Column is not capable of resisting lateral or uplift load.

## BLACKJACK/REDJACK Column Kits and Plate Kits

## UPDATED PRODUCT LINE - COLUMN KITS AND PLATE KITS

Same strong columns now available in Column Kits and Plate Kits to fit different beam and load requirements.

REDJACK 2.5, BLACKJACK 3.0 and REDJACK 3.0 structural columns are now available in two distinct kits

- Column Kits consist of a column tube, collar and screw assembly.
- Plate Kits only include top and bottom plates and replace the former Universal Component Kit.

Column Kits and Plate Kits are sold and used together, and provide better flexibility to suit various project applications and load requirements.

| Selecting your BlackJack or RedJack Column Kit |  |  |  |
| :---: | :---: | :---: | :---: |
| Use your height and capacity requirement to determine the correct MiTek Column Kit for your project. |  |  |  |
|  | REDJACK 2.5 | BLACKJACK 3.0 | REDJACK 3.0 |
| Column kit | $2.5 " \times 2.5 "$ tube, 11 gauge | $3.0^{\prime \prime} \times 3.0^{\prime \prime}$ tube, 10 gauge | $3.0^{\prime \prime} \times 3.0^{\prime \prime}$ tube, 8 gauge |
| Extended lengths available * (maximum 4" adjustment) | 96", 102", 108" and 120" | 96", 102", 108" and 120" |  |

* For additional flexibility, column tubes can be cut to adapt to your project's height requirement. Ensure cut is smooth and square.

## Selecting your Plate Kit

Use your beam material and beam width to determine the correct MiTek Plate Kit for your project.

|  | PKA: Plate ${ }^{\text {** }}$ + PL | PKB: Top Plate B* + PL | PKC: Top Plate C* + PL | PKD: Top Plate D* + PL |
| :---: | :---: | :---: | :---: | :---: |
| Plate kit | 4.5" x 6" x 3 gauge (PKA \& PL are interchangeable only on RJ25 columns) | $3.5^{\prime \prime} \times 7 \text { " x 1/2" }$ <br> $4.5^{\prime \prime} \times 6$ " x 3 gauge | $5.25^{\prime \prime} \times 7 \text { " x 1/2" }$ $4.5^{\prime \prime} \times 6 \text { " x } 3 \text { gauge }$ |  |
| Intended Use Plates A, B, C or D | Steel beam <br> 2 or 3-ply lumber beam <br> 2 or 3-ply SCL beam <br> or as a bottom plate of RJ 2.5 | 2,3 or 4-ply lumber beam <br> 2,3 or 4-ply SCL beam | 3 or 4-ply lumber beam 3 or 4-ply SCL beam | 3 or 4-ply lumber beam 3 or 4 -ply SCL beam |
| Intended Use - PL | Bottom plate, or 3 or 4-ply lumber beam as top plate of RJ 2.5 | Bottom plate | Bottom plate | Bottom plate |

## BLACKJACK / REDJACK Adjustable Support Columns

Adjustable Support Columns are designed and tested to meet or exceed the CAN/ CGSB-7.2-94 Adjustable Steel Columns standard. REDJACK 2.5, BLACKJACK 3.0 and REDJACK 3.0 are assembled with Column Cap (CCK) or Plate at the column top to support dimensional lumber, SCL or steel beams.

Materials: See chart below
Finish: REDJACK 2.5 \& REDJACK 3.0 Tube - Powder-Coated Red Paint; BLACKJACK 3.0 Tube - Powder-Coated Black Paint; Plates, Column Caps - Grey Primer Paint

## Installation:

- Ensure column is installed in a vertical and plumb position.
- Column base shall be aligned and secured to a proper supporting slab.
- Top plate shall cover the full width of the supported beam. Beam shall be centered on the top plate and continuous across the entire length of the plate. For split beam applications, please contact MiTek.
- For multiple ply beams, ensure to laminate plies together to act as a single member.
- Square tube may be cut down, ensure cut is smooth, square and level.
-     - Turn threaded collar or threaded pipe to extend the column to the desired height. Maximum 4" adjustment. Secure the top plate to beam with four (4) $1 / 4$ " x 2 " screws for wood beam, self tapping screws or tack weld for steel beam.

## Column Height Specification Table

Plate Specification Table

| Plate | Dimensions (in) |  | Gauge / <br> Thickness | $\begin{gathered} \text { Beam } \\ \text { Size } \\ \hline \end{gathered}$ | Installation Notes |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | W | L |  |  |  |
| PL ( $4.5 \times 6$ ) <br> Bottom Plate | 4.5 | 6 | 3 GA | 3-Ply 2x | Inter-changeable with A ( $3.5 \times 5.25$ ) plate and use as top plate on RJ25 columns |
|  |  |  |  | 4-Ply 2x |  |
| $\begin{aligned} & \text { A }(3.5 \times 5.25) \\ & \text { Top Plate } \end{aligned}$ | 3.5 | 5.25 | 3 GA | 2-Ply SCL | Inter-changeable with PL $(4.5 \times 6)$ plate and use as bottom plate on RJ25 columns |
|  |  |  |  | 3-Ply SCL |  |
|  |  |  |  | 2-Ply 2x |  |
|  |  |  |  | 3-Ply 2x |  |
| $\begin{aligned} & \text { B }(3.5 \times 7) \\ & \text { Top Plate } \end{aligned}$ | 3.5 | 7 | 1/2" | 2-Ply SCL | Use 4 outer holes for beam attachment |
|  |  |  |  | 4-Ply SCL |  |
|  |  |  |  | 2-Ply 2x |  |
|  |  |  |  | 4-Ply 2x |  |
|  |  |  |  | 3-Ply SCL | Use 4 inner holes |
|  |  |  |  | 3-Ply 2x | for beam attachment |
| $\begin{aligned} & \text { C }(5.25 \times 7) \\ & \text { Top Plate } \end{aligned}$ | 5.25 | 7 | 1/2" | 3-Ply SCL | Use all 4 holes for beam attachment |
|  |  |  |  | 4-Ply SCL |  |
|  |  |  |  | 3-Ply 2x |  |
|  |  |  |  | 4-Ply 2x |  |
| $\begin{aligned} & \mathrm{D}(7 \times 7) \\ & \text { Top Plate } \end{aligned}$ | 7 | 7 | 1/2" | 4-Ply SCL | Use 4 outer holes for beam attachment |
|  |  |  |  | 4-Ply 2x |  |
|  |  |  |  | 3-Ply SCL | Use 4 inner holes for beam attachment |
|  |  |  |  | 3-Ply 2x |  |

Each component kit comes with one PL plate + one A or B or C or D plate.
SCL members assume $1-3 / 4^{\prime \prime}$ width.
Bold: Beam size that plate is sized for.
Grey shades: Rotate plate to fit, beam width parallel with the longer side of the plate.

## CCK BLACKJACK / REDJACK Column Caps

Cap version for BLACKJACK 3.0 / REDJACK 2.5/3.0 Adjustable Structural Columns, CCK are sized to suit various SCL beam sizes and 3-ply/4-ply dimensional lumber beams. Cap style design helps to resist beam rotation.

Materials: CCK35, CCK45, CCK55, CCK60: 7 gauge ASTM A1011; CCK525, CCK71: 3 gauge ASTM A 36 steel

## Installation:

- Replaces BLACKJACK / REDJACK Top Plate.
- Slide column cap tube into the top of the threaded pipe component.
- MiTek's WS3 structural wood screws, $1 / 4^{\prime \prime}$ dia. x $3^{\prime \prime}$ long, are supplied with CCK Column Caps.
- Beam shall be continuous across the entire length of the column cap. For split beam applications, please contact MiTek.

Typical CCK Installation

| MiTek <br> Stock No. | Steel <br> Gauge | Dimensions (in) |  |  | Fastener Schedule ${ }^{3}$ |  | $\begin{gathered} \text { D Fir-L } \\ \text { Factored Resistance } \end{gathered}$ |  | S-P-FFactored Resistance |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | W | H | L |  |  |  |  |  |  |
|  |  |  |  |  | Beam |  | Bearing (100\%) ${ }^{1,2,5}$ |  | Bearing (100\%) ${ }^{1,2,5}$ |  |
|  |  |  |  |  | Qty | Type | Lbs | kN | Lbs | kN |
| CCK35 | 7 | 3-5/8 | 6-1/2 | 11 | 16 | WS3 | 31270 | 139.1 | 23675 | 105.3 |
| CCK45 | 7 | 4-5/8 | 6-1/2 | 11 | 16 | WS3 | 40195 | 178.8 | 30440 | 135.4 |
| CCK525 | 3 | 5-1/4 | 8 | 13 | 16 | WS3 | 49900 | 222.0 | 40970 | 182.2 |
| CCK55 | 7 | 5-1/2 | 6-1/2 | 11 | 16 | WS3 | 46905 | 208.6 | 35515 | 158.0 |
| CCK60 | 7 | 6-1/8 | 6-1/2 | 11 | 16 | WS3 | 49900 | 222.0 | 40590 | 180.5 |
| CCK71 | 3 | 7-1/4 | 6-1/2 | 11 | 16 | WS3 | 49900 | 222.0 | 47350 | 210.6 |

Each Column Cap Kit comes with one CCK Column Cap + one PL ( $4.5 \times 6$ ) Bottom Plate

1) Factored bearing resistances are for standard term loading; reduce for other load durations in accordance with the code.
2) Bearing loads are based on compression perpendicular to grain values published in CSA 086:19 and having the bucket base in full contact with the supported member.
3) MiTek's WS3 structural wood screws are $1 / 4$ " dia. x 3 " long and are included with CCK Column Caps.
4) Beams shall be designed to support the required loads. Beam shear may limit loads to less than listed.
5) The factored resistance of the CCK may exceed the column capacity. Refer to the BLACKJACK / REDJACK Column load tables (supporting steel beam) for the maximum factored resistance based on column length.
New products or updated product information are designated in blue font.

1) Column Factored Resistance is limited by the tube's axial compressive strength. The depicted values are established in accordance with CSA S16.
2) Factored Resistance supporting wood beam is limited by the lesser of column tube's axial compressive strength and beam's compression perpendicular to grain strength.
3) Factored Resistances are for standard term loading; reduce for other load durations in accordance to the code.
4) SCL Factored Beam Bearing Resistance assumes $1-3 / 4^{\prime \prime}$ ply width and specified compression perpendicular to grain $f_{c p}=1,365$ psi. For beams of weaker specified $f_{c p}$ or smaller width, calculate the Factored Beam Bearing Resistance as follows: overall beam width $\times$ plate length $x f_{c p} \times 0.8$.
Use the minimum of the calculated "Factored Beam Bearing Resistance" and the "Factored Resistance of the Column Capacity supporting steel beam"
as the Factored Resistance of the column supporting the respective beam.
5) Grey shades: Rotate plate to fit, beam width parallel with the longer side of the plate.
6) Column is not capable of resisting lateral or uplift load.
7) Table values not applicable to split beam installation. For beams not continuous across the entire length of the supporting top plate, please contact MiTek.

For Overall Column Length not listed in the table, use the capacity of the next longer Column Length in line.
Example: For REDJACK 2.5 having an overall length of 100 " ( 2540 mm ) use the values of the $102^{\prime \prime}(2591 \mathrm{~mm})$ Column Length

1) Column Factored Resistance is limited by the tube's axial compressive strength. The depicted values are established in accordance with CSA S16.
2) Factored Resistance supporting wood beam is limited by the lesser of column tube's axial compressive strength and beam's compression perpendicular to grain strength.
3) Factored Resistances are for standard term loading; reduce for other load durations in accordance to the code.
4) SCL Factored Beam Bearing Resistance assumes $1-3 / 4^{\prime \prime}$ ply width and specified compression perpendicular to grain $f_{c p}=1,365 \mathrm{psi}(9.4 \mathrm{MPa})$. For beams of weaker specified $f_{c p}$ or smaller width, calculate the Factored Beam Bearing Resistance as follows: overall beam width $x$ plate length $\times f_{c p} \times 0.8$.
Use the minimum of the calculated "Factored Beam Bearing Resistance" and the "Factored Resistance of the Column Capacity supporting steel beam" as the Factored Resistance of the column supporting the respective beam.
5) Grey shades: Rotate plate to fit, beam width parallel with the longer side of the plate.
6) Column is not capable of resisting lateral or uplift load.
7) Table values not applicable to split beam installation. For beams not continuous across the entire length of the supporting top plate, please contact MiTek.

1) Column Factored Resistance is limited by the tube's axial compressive strength. The depicted values are established in accordance with CSA S16.
2) Factored Resistance supporting wood beam is limited by the lesser of column tube's axial compressive strength and beam's compression perpendicular to grain strength.
3) Factored Resistances are for standard term loading; reduce for other load durations in accordance to the code.
4) SCL Factored Beam Bearing Resistance assumes 1-3/4" ply width and specified compression perpendicular to grain $f_{c p}=1,365 \mathrm{psi}(9.4 \mathrm{MPa})$. For beams of weaker specified $f_{c p}$ or smaller width, calculate the Factored Beam Bearing Resistance as follows: overall beam width x plate length $\mathrm{x} \mathrm{f}_{\mathrm{cp}} \times 0.8$.
Use the minimum of the calculated "Factored Beam Bearing Resistance" and the "Factored Resistance of the Column Capacity supporting steel beam"
as the Factored Resistance of the column supporting the respective beam.
5) Grey shades: Rotate plate to fit, beam width parallel with the longer side of the plate.
6) Column is not capable of resisting lateral or uplift load.
7) Table values not applicable to split beam installation. For beams not continuous across the entire length of the supporting top plate, please contact MiTek.

1) Column Factored Resistance is limited by the tube's axial compressive strength. The depicted values are established in accordance with CSA S16.
2) Factored Resistance supporting wood beam is limited by the lesser of column tube's axial compressive strength and beam's compression perpendicular to grain strength.
3) Factored Resistances are for standard term loading; reduce for other load durations in accordance to the code.
4) SCL Factored Beam Bearing Resistance assumes $1-3 / 4$ " ply width and specified compression perpendicular to grain $f_{c p}=1,365 \mathrm{psi}(9.4 \mathrm{MPa})$. For beams of weaker specified $\mathrm{f}_{\mathrm{cp}}$ or smaller width, calculate the Factored Beam Bearing Resistance as follows: overall beam width x plate length $\mathrm{x} \mathrm{f}_{\mathrm{cp}} \mathrm{x} 0.8$.
Use the minimum of the calculated "Factored Beam Bearing Resistance" and the "Factored Resistance of the Column Capacity supporting steel beam" as the Factored Resistance of the column supporting the respective beam.
5) Grey shades: Rotate plate to fit, beam width parallel with the longer side of the plate.
6) Column is not capable of resisting lateral or uplift load.
7) Table values not applicable to split beam installation. For beams not continuous across the entire length of the supporting top plate, please contact MiTek.

Footing Specifications
Use in conjunction with MiTek Adjustable Support Columns, BLACKJACK \& REDJACK series

1) Footing design is in accordance with CAN/CSA A23.3, and meets or exceeds the prescriptive requirements of NBCC
Part 9 and its provincial counterparts.
2) Soil bearing capacity and load(s) to be supported by the footing shall be verified by an engineer.
3) Concrete shall be normal Portland cement, Type 10 or Type 50 as required, slump +/$75 \mathrm{~mm}\left(3^{\prime \prime}\right)$, entrained air 4-7\%, maximum aggregate $20 \mathrm{~mm}\left(3 / 4^{\prime \prime}\right)$ diameter, minimum strength of $20 \mathrm{MPa}(2,900 \mathrm{psi})$ at 28 days.
4) Rebar shall be Grade 400, tied at all intersections, and placed in conformance with Figure 1.
5) Refer to Table 1 for footing size ( $b \times b \times h$ ) and rebar spacing (s). Footing height (h) indicates the depth of footing below the column base plate. Rebar edge distance (e) and depth of concrete below rebar (c) shall be no less than 3 ".

Figure 1: Rebar layou

[^0]:    MiTek Plate Kits are sold separately from MiTek Structural Column Kits. MiTek Plate Kits are to be exclusively used with MiTek REDJACK 2.5, BLACKJACK 3.0, \& REDJACK 3.0 column kits.
    When choosing your plate kit and column kit for your application, both the column capacity and the plate capacity must be considered.
    The lower value governs. For Steel Beams, use Plate Kit A and column capacity as the top plate bearing capacity is not relevant.

    * Plates are shown upside down for illustration purposes. Refer to figure 1 for plate position when installed
    ** Plate A is shown in the bottom plate position.
